# **ACTRIS- Aerosol Cloud and TRace gas Research Infrastructure**

# What is ACTRIS?

ACTRIS is a pan-European distributed research infrastructure producing high-quality data and information on short-lived atmospheric constituents and on the processes leading to the variability of these constituents in natural and controlled atmospheres.

ACTRIS is key to supporting scientific advances in the field of atmospheric research

Short-lived atmospheric constituents

< 150 atmospheric variables

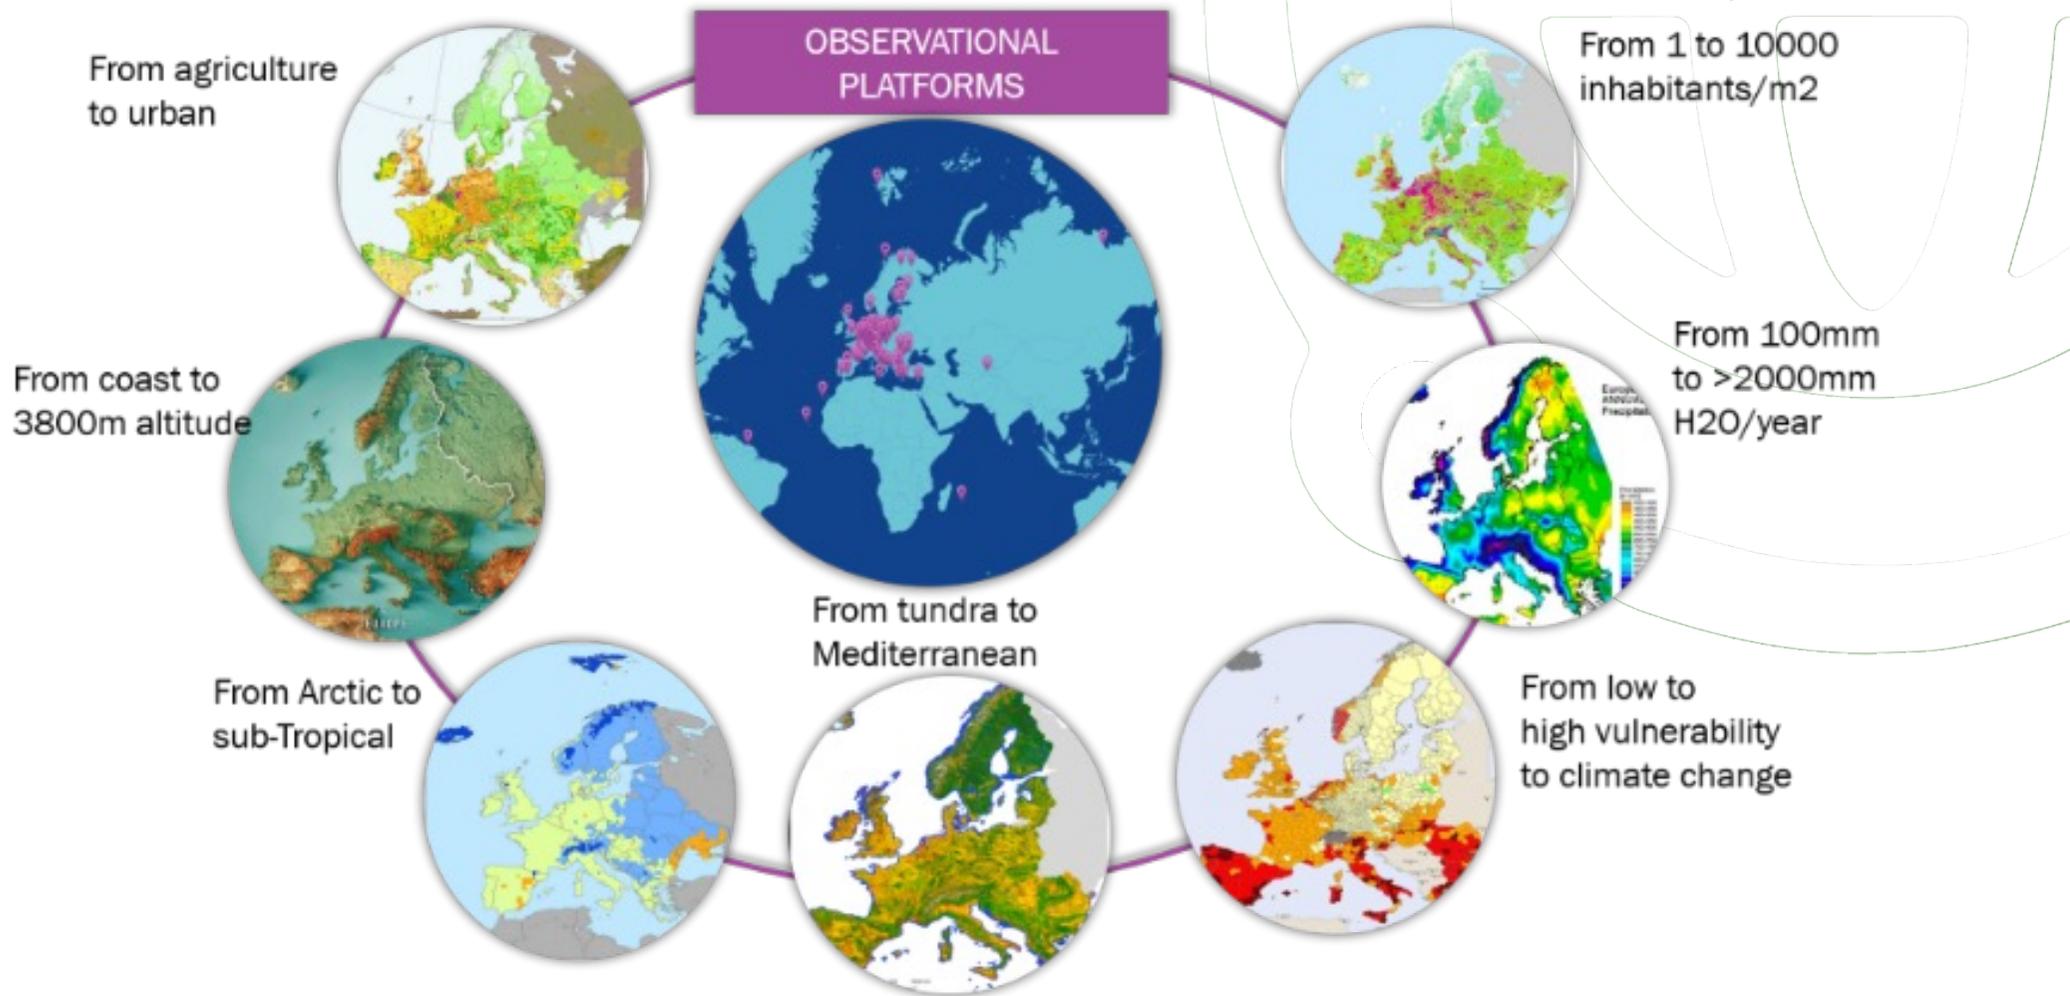

Composition

Feedbacks

# Coverage of different climates, land uses and ecoregions

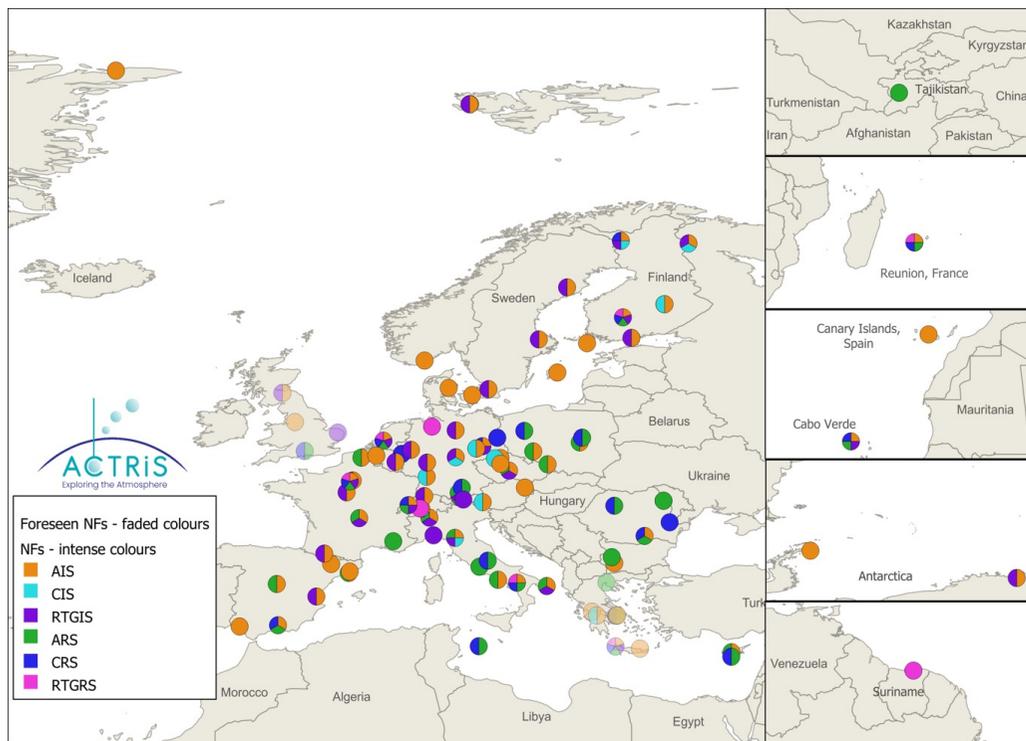

# Coverage of different climates, land uses and ecoregions

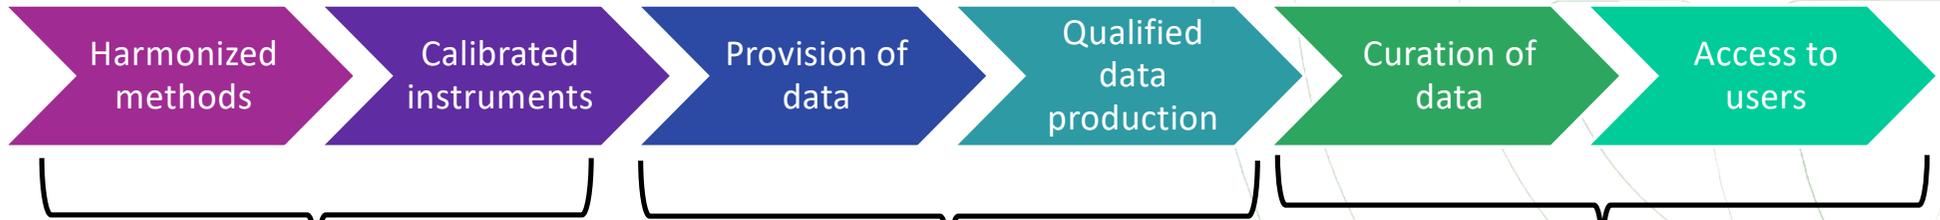

# Core Asset: ACTRIS National Facilities

The National Facilities are the heart of atmospheric scientific excellence

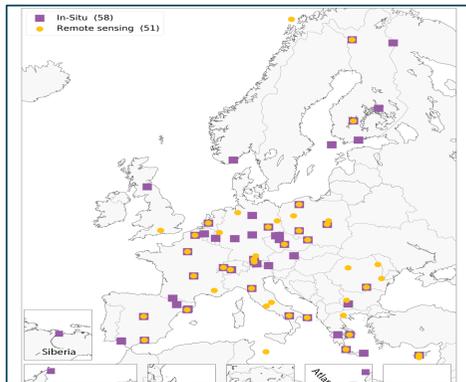

- Aerosol in-situ
- Cloud in-situ
- Reactive trace gas in-situ
- Aerosol remote sensing
- Cloud remote sensing
- Trace gas remote sensing

- Centre for Aerosol In Situ Measurements
- Centre for Aerosol Remote Sensing
- Centre for Cloud In Situ Measurements
- Centre for Cloud Remote Sensing
- Centre for Reactive Trace Gases In Situ Measurements
- Centre for Reactive Trace Gases Remote Sensing

- In situ Data Centre Unit (In-Situ)
- Aerosol remote sensing Data Centre Unit (ARES)
- Cloud remote sensing Data Centre Unit (CLU)
- Trace gas remote sensing Data Centre Unit (GRES)
- Atmospheric simulation chamber Data Centre Unit (ASC)

Qualify for ACTRIS NF – set of variables at the sites  
 Or ACTRIS compliant data – follow all ACTRIS recommendations

# ACTRIS variables and associated methodologies

ACTRIS aerosol in-situ variables	Associated	Measurement techniques
	Sampling	
	Thermal-optical analyzer	
	Offline filter-based IC, high-resolution FT-IC-MS, LC/MS	
	Aerosol Mass Spectrometer	
	X-Ray Fluorescence, Particle Induced X-ray Emission	

ACTRIS cloud in-situ variable	Topical Centre	Measurement techniques
		Integrating Cloud Probe
		Cloud Droplet Probe
		Cloud Ice Probe
		Aerosol Particle Sampler
		Bulk collectors
		IMP Instrument

ACTRIS trace gas remote sensing variables	Topical Centre	Measurement techniques
		FTIR (single)
		FTIR (double)
		UVVIS - Zenith-sky
		UVVIS - MAXDOAS
		UVVIS - PARADISA
		OS-DIAL

ACTRIS aerosol remote sensing variables	Topical Centre	Measurement techniques
		High-power aerosol lidar
		Automatic sun/sky/lunar photometer

Data product represents a fundamental property from reaction chamber	Aerosol/Cloud/Trace gas	Topical centre	Concentration of chemical species in gas-phase	Concentration of chemical species in aerosol phase	Concentration of chemical species in aqueous phase	Aerosol size distribution	Total aerosol mass	Particle number concentration	Particle absorption coefficients	Particle scattering coefficients	Particle extinction coefficients	Active flux
<b>Handled by ASC – the atmospheric simulation chamber data centre unit</b>												
Rate constants for gas-phase reactions	Trace gas		CIgas									
Rate constants for condensed phase reactions	Aerosol/cloud		none									
Secondary organic aerosol yields	Aerosol		CIgas, CAIS									
Photolysis frequencies	Trace gas		CIgas									
Quantum yields	Trace gas		CIgas									
Vapor pressures	Trace gas / aerosol		CIgas									
Henry's constants	Trace gas, cloud, aerosol		none									
Mass extinction coefficients	Aerosol		CAIS									
Mass absorption coefficients	Aerosol		CAIS									
Mass scattering coefficients	Aerosol		CAIS									
Complex refractive index	Aerosol		CAIS									
Growth factors	Aerosol		CAIS

Increasing number of sites with NRT data

150 atmospheric variables  
ca 35 aerosol variables  
65 trace gases,  
20 cloud variables  
58 methodologies  
time resolution ranging from seconds to 1 week.

# ACTRIS variables and associated methodologies

The screenshot shows the top portion of a BAMS article page. On the left, there is a BAMS logo and the text 'Bulletin of the American Meteorological Society'. Below this is a menu icon and the text 'Early Online Release'. In the center, there are navigation links: '< Previous', 'Back to Results', and 'Next >'. Below these links, it says 'Article Type: Research Article'. The main title of the article is 'Aerosol, Clouds and Trace Gases Research Infrastructure – ACTRIS, the European research infrastructure supporting atmospheric science'.

*Laj et al, accepted for publication in BAMS April 2024*

The screenshot shows the full text of the article. The title is 'Aerosol, Clouds and Trace Gases Research Infrastructure – ACTRIS, the European research infrastructure supporting atmospheric science'. The authors listed are Paolo Laj, Cathrine Lund Myhre, Véronique Riffault, Vassilis Amiridis, Hendrik Fuchs, Konstantinos Eleftheriadis, Tuukka Petäjä, Thérèse Salameh, Niku Kivekäs, Eija Juurola, Giulia Saponaro, Sabine Philippin, Carmela Cornacchia, Lucas Alados Arboledas, Holger Baars, Anja Claude, Martine De Mazière, Baris Dils, Dufresne, Nikolaos Evangeliou, Olivier Favez, Markus Fiebig, Martial Haefliger, Hartmut Herrmann, Kristina Höhler, Niklas Illmann, Axel Kreuter, Elke Ludwig, Marinou, Ottmar Möhler, Lucia Mona, Lise Eder Murberg, Doina Nicolae, Anna Novelli, Ewan O'Connor, Kevin Ohneiser, Rosa Maria Petracca Altieri, Bénédicte Picquet-Varrault, Dominik van Pinxteren, Bernhard Pospichal, Jean-Philippe Putaud, Stefan Reimann, Nikolaos Siomos, Iwona Stachlewska, Ralf Tillmann, Kalliopi Artemis Voudouri, Ulla Wandinger, Alfred Wiedensohler, Amoud Apituley, Adolfo Comerón, Martin Gysel-Beer, Nikolaos Mihalopoulos, Nina Nikolova, Aleksander Pietruczuk, Stéphane Sauvage, Jean Sciare, Henrik Skov, Tove Svendby, Erik Swietlicki, Dimitar Tonev, Geraint Vaughan, Vladimir Zdimal, Urs Baltensperger, Jean-François Doussin, Markku Kulmala, Gelsomina Pappalardo, Sanna Sorvari Sundet, and Milan Vana. The text includes affiliations for each author, such as 'a Univ. Grenoble-Alpes, CNRS, IRD, INP, INRAE, IGE, Grenoble, France' and 'i ACTRIS ERIC, Helsinki, Finland'. There is also a circular seal of the American Meteorological Society on the right side of the text.

65 trace gases,  
20 cloud variables  
58 methodologies  
time resolution ranging from  
seconds to 1 week.

Increasing  
number of sites  
with NRT data

The mission of the ACTRIS Data Centre (DC) is to compile, archive and provide access to well documented and traceable ACTRIS measurement data and data products, including digital tools for data quality control, analysis, visualization, and research.

As a tool for science, the highest priorities for the ACTRIS DC are to maintain and increase the availability of ACTRIS data and data products relevant to climate and air quality research for all interested users.

# ACTRIS ARES Unit: Aerosol Remote Sensing

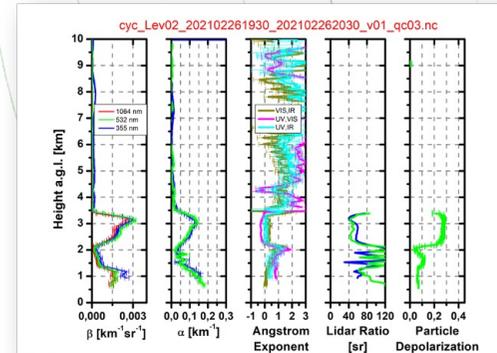

# ARES Data

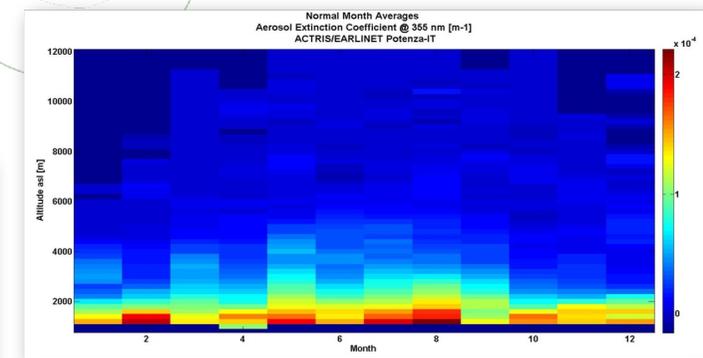

- Raw data at native vertical and temporal resolution
- Pre-processed lidar data (low and high temporal resolution)
- Cloud masking
- Optical properties, multiwavelength and high resolution profiles
- QC optical properties
- Climatological products
- Tailored products (like Eyja)

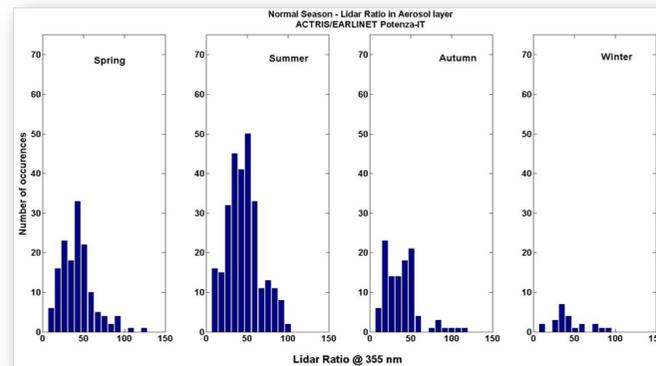

## Aerosol Optical Profile Products

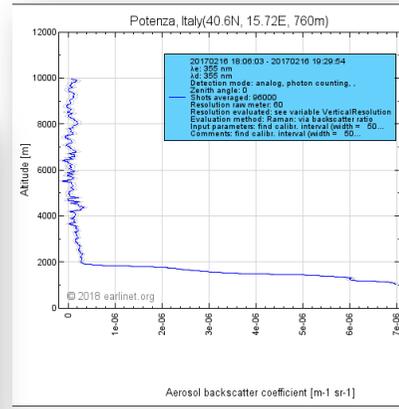

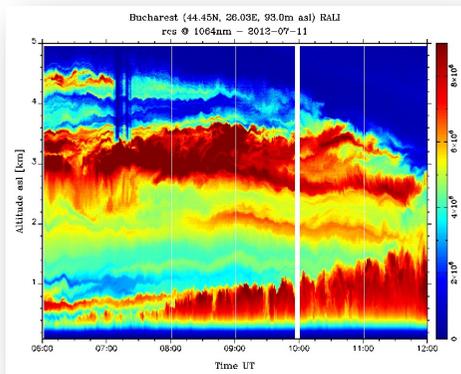

## Level3: Aerosol Extinction Coefficient

## Level3: Lidar Ratio in Aerosol layer

# ARES Data Level Structure

**ACTRIS data level 0**  
Raw sensor output. Native resolution, metadata necessary for next level

**Established format and content**

**ACTRIS data level 1**  
Calibrated and quality assured data with minimum level of quality control.

**Potential NRT release**

**Pre-processed signals**  
**High Resolution products**  
**High quality profiles – Multi-wavelength Layering /Typing products (under dev.)**

**ACTRIS data level 2**  
Approved and fully quality controlled ACTRIS data product or geophysical variable

**Potential NRT release**

**ACTRIS data Level 3**  
Elaborated ACTRIS data products derived by post-processing of ACTRIS Level 0 -1 -2, and data from other sources. The data can be gridded or not.

**Level 3 climatological**

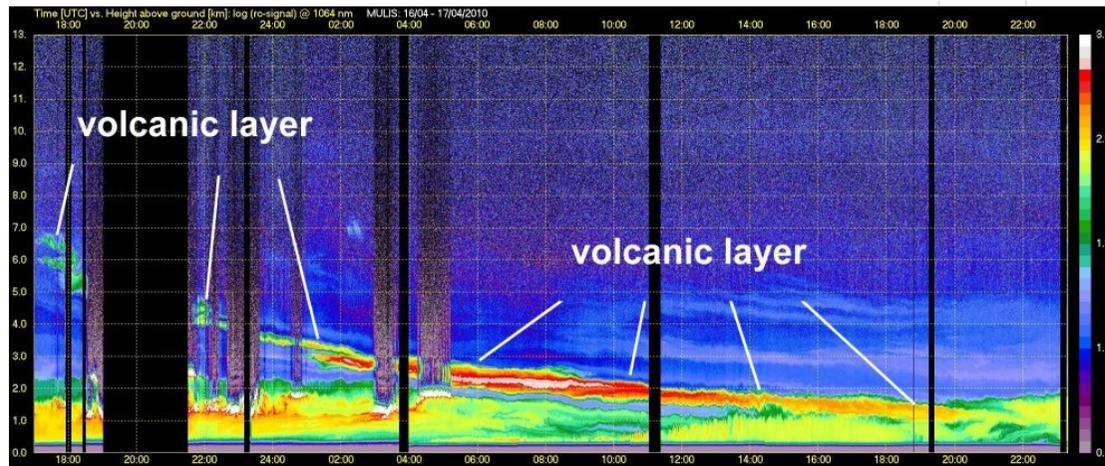

**EARLINET-AERONET combined data internally available**

**Synthesis products**  
Data products not under direct ACTRIS responsibility from e.g. research activities, citizen science, for which ACTRIS offers repository and access.

# Extreme events characterization

## Eyjafjallajökull eruption observation over Payerne

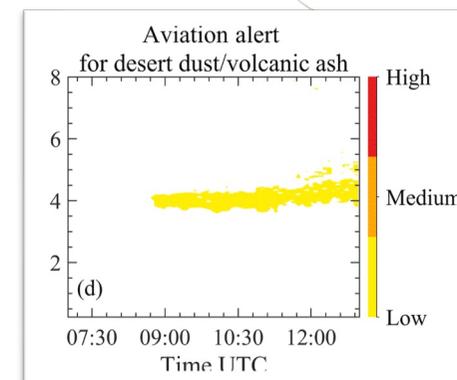

- Daily report to VAAC
- Database released
- Modification processes over Europe

*Pappalardo et al., ACP, 2014*

Ingestion in potentially operational system  
*Papagiannopoulos et al., ACP, 2020*  
*Mona et al., NHESS in preparation*

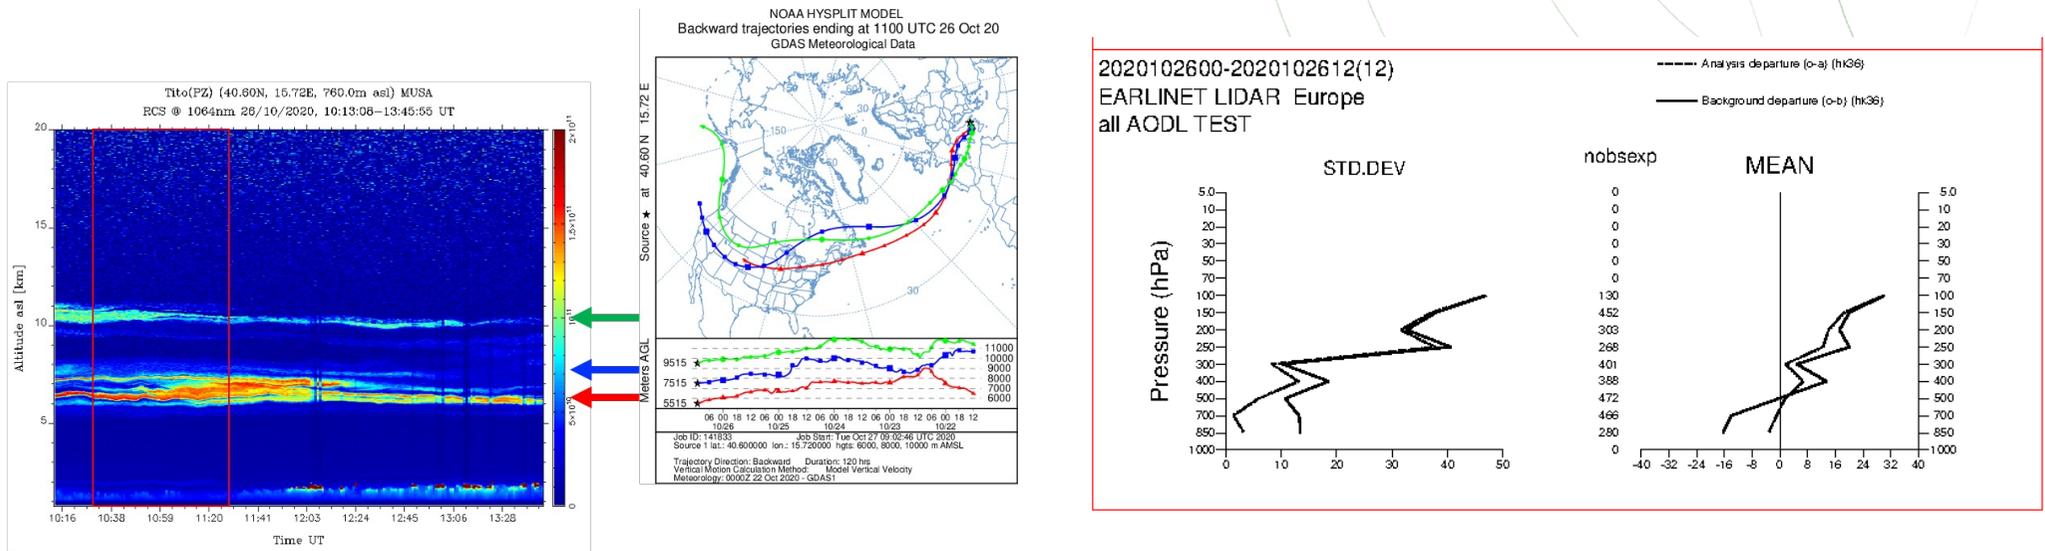

**Hazardous events monitoring and  
impact mitigations**

# NRT provision

Currently 11 stations are providing data in NRT to CAMS under CAMS21b project (11.2023-09.2027)

## Centralized extended QCs in NRT

Although few measurements at just 1 site were assimilated some not negligible impacts are visible in the vertical profiles.

## Model improvement through assimilation
